Linux

Ubuntu or other Debian based systems

These instructions are mainly for Linux

Step 1:

Download and Install Mono Framework for Linux

<http://www.go-mono.com/mono-downloads/download.html>

Step 2:

Download the program zip file , extract it and run it

http://www.robonavy.com/downloads/ISOBOTUSBIR_Linux.zip

Step 3:

Write in the terminal

```
~: mono ISOBOTUSBIR.exe
```

The program will lunch , choose your correct come port

The program is easy to follow.

How to know the device is setup correctly:

The Device Red led will blink 1 time every 5 seconds

When you select a command , the Led Red will blink 3 time faster (1 second between them)

And then send the command.

If you don't see this behavior , please check your serial port installation

And point the program to the correct com/ serial port name
